You recently requested the Regional "variable cost" of sewerage water during 1986. Unfortunately, this cost is dependent on many unknowns such as the actual flow from East St. Louis, Cahokia, and the start-up timing of the Regional Plant.

My best guess at this time is as follows:

Jan - May 1986: Monsanto will be paying on a fixed flow estimate.
June 86 - May 87: Additional flow from Monsanto will cost approx.
\$2.00/1,000 gallons.
